

ELIMINATION OF LIVE WORK PROGRAM

Mackellar Group has implemented SafeGauge products to enhance safety and efficiency.

ELIMINATION OF LIVE WORK

As a leading provider of heavy equipment hire and earthworks solutions for the mining and civil sectors, MacKellar Group has a longstanding commitment to safety and operational excellence.

To further enhance safety measures for staff and personnel, and to remain at forefront of Elimination of Live Work (ELW) initiatives, MacKellar has rolled out SafeGauge's range of safety products at Middlemount and Carmichael sites.

This improvement is an ELW initiative aimed to increase safety for maintenance fitters that could potentially be in a hazardous situation when performing particular maintenance tasks.

WHY SAFEGAUGE?

This new initiative is testament to MacKellar's long-standing commitment to safety and operational excellence.

Mackellar first met with with the SafeGauge team in February 2023, at the Head Office in Nambour and the impressive tooling was purchased immediately.

SafeGauge was promptly sent to the Middlemount and Carmichael sites in early March and use of dial indicators and pressure test kits began.

With SafeGauge now fully implemented at these two sites, the dial indicators are being used by our maintenance personnel on:

- Excavators: on slew rings and for implement pins/bushes
- Dozers: for measuring equalizer bar movement
- Dump Trucks: for ball stud inspections
